Website Architecture Short Note (README)

Pakistani Luxury Ladies Designer Suits & Custom Stitching Atelier | Landhi Town, Karachi

1. How Many Pages & What Are They?

The Alif Laam Meem website is built as 8 standalone HTML5 pages in the project root directory, powered by shared assets (assets/css/style.css, assets/js/main.js, and 12 local couture photos):

01. **index.html (Home):** Cinematic 3D split-screen hero with 4-edition switcher, live typewriter text, overlapping Quick Suit & Stitching Finder bar, infinite marquee, animated counter stats, 3D bento category cards, 6-suit featured grid with Unstitched/Stitched toggle, and 4-step orbital workflow.
02. **about.html (About Us):** Brand heritage rooted in Landhi Town, Karachi; pure mill-verified fabric standards; artisan zardozi/dabka handwork philosophy; and atelier craftsmanship milestones.
03. **collections.html (Collections):** Interactive 14-suit catalog covering Summer Lawn & Chikankari, Winter 9000 Velvet & Karandi, Luxury Raw Silk Formals, and Bridal Wear with instant category filters.
04. **wedding.html (Wedding & Heavy Wear):** Dedicated bridal couture lounge for Barat Lehengas, Walima Reception Gowns, Nikkah Joras, and Heavy Formal Party Wear with bridal consultation booking.
05. **stitching.html (Stitching Studio):** 3-tier custom tailoring packages (Seasonal, Luxury Formal, Bridal Couture), interactive Bust/Waist Size Calculator, and standard Pakistani size chart (XS-XL).
06. **gallery.html (Gallery / Lookbook):** High-resolution editorial portrait lookbook with category filtering (Bridal, Seasonal, Zardozi Craft Close-Ups) and one-click Quick-View ordering modal.
07. **contact.html (Contact Us):** Direct studio desk details for Landhi Town, Karachi, phone/WhatsApp (0322-1200965), official email (info@aliflaammeem.pk), FAQ accordion, and direct inquiry form.
08. **cart.html (Shopping Bag & Checkout):** Persistent localStorage shopping bag with quantity controls, custom stitching/size breakdown, delivery fee calculation, and instant WhatsApp/Email order placement.

2. How Did You Use CSS?

All styling is centralized in a zero-dependency master stylesheet (assets/css/style.css):

- **CSS Design Tokens (:root):** Defines a royal Pakistani couture palette (--maroon-obsidian, --maroon-primary, --emerald-deep, --gold-primary, --ivory-bg) paired with Cormorant Garamond & Plus Jakarta Sans fonts.
- **True 3D Perspective Animations:** Uses perspective: 1200px and transform-style: preserve-3d on the Mughal-arched Hero stage with continuous 3D floating keyframes (@keyframes float3DStage), two 3D tilted orbital rings (@keyframes orbit3DRing1/2), and three floating 3D depth chips at translateZ(55px).
- **Interactive 3D Card Tilt & Spotlight:** Every card (.tilt-3d) tilts dynamically in 3D space on cursor movement (perspective(950px) rotateX/rotateY) while tracking a live radial gold spotlight (--mx, --my).
- **Strict Grid Baseline Alignment:** Multi-column CSS Grids (.products-grid, .category-grid, .packages-grid) use height: 100%; display: flex; flex-direction: column with margin-top: auto on card footers so all prices, stitching toggles, and buttons align on the exact same horizontal line across every row.
- **Responsive Multi-Device Layout:** Media queries at 1380px, 1120px, and 720px adapt 4- and 3-column desktop grids into 2-column tablet layouts and 1-column mobile stacks with zero horizontal overflow.

3. How Does Navigation Work?

Navigation is synchronized across all 8 pages via assets/css/style.css and upgradeGlobalHeaderAndDock() inside assets/js/main.js:

- **Unified Sticky Header & 3-Zone Alignment:** Pairs the top announcement bar (.top-bar) with the sticky glassmorphic header (.site-header). Inside .header-inner, elements are strictly aligned into 3 zones: (1) Brand Emblem & Title on the left, (2) Single-row navigation links centered with animated underline sweeps (::after), and (3) Quick-action vector buttons (WhatsApp, Shopping Bag with live counter badge, and the 'Custom Stitch' pill CTA) on the right.
- **Centered Dropdown Sub-Menus & Hover Bridge:** Sub-categories are grouped into 3 centered dropdowns (Collections, Bridal & Heavy Wear, and Atelier & More) so top-level links never wrap onto a second line. Each .dropdown-menu opens centered beneath its trigger (left: 50%; transform: translate(-50%, 0)) with an invisible ::before hover bridge so diagonal cursor movement never closes the menu prematurely. Every dropdown item includes a custom vector SVG icon badge, title, and subtitle.
- **URL Query-Parameter Deep Linking:** Dropdown links and the homepage Quick Suit Finder pass URL parameters (e.g., collections.html?filter=summer, collections.html?filter=winter, wedding.html?filter=barat). On page load, initProductGrids() reads URLSearchParams, activates the matching filter pill, and renders the corresponding suits automatically without requiring a backend server.
- **Mobile Drawer, Left Rail & Floating Stack:** On viewports <= 1120px, #mobileMenuBtn toggles a touch-friendly slide-down accordion menu. Users also have a Top Scroll Progress Bar (.scroll-progress), a Desktop Left Quick-Access Rail (.social-rail), and a Right Floating Action Stack (.floating-dock) featuring Back-to-Top, Email, Shake-Call, and Double-Ring Pulsing WhatsApp buttons with slide-out tooltips.

4. GitHub & Hostinger Deployment Guide

A. Upload Code to GitHub: Run inside the project folder to push to your GitHub repository:
git init && git add . && git commit -m "Initial release: Alif Laam Meem couture website"
git branch -M main && git remote add origin https://github.com/<user>/<repo>.git && git push -u origin main

B. Deploy on Hostinger (Option 1 - File Manager): Log in to Hostinger hPanel -> Files -> File Manager -> open public_html. Upload Alif_Laam_Meem_Hostinger_Deploy.zip into public_html and Extract it so index.html, all 7 other .html pages, and the assets/ directory sit directly inside public_html/.

C. Deploy on Hostinger (Option 2 - Git Auto-Deploy): In Hostinger hPanel -> Advanced -> Git, paste your GitHub repository URL, set branch to main, leave the install path blank (public_html), and click Deploy.
